

PRESS RELEASE

PULSCO AT WEFTEC 2017

PULSCO exhibits at WEFTEC 2017 the premier North American wastewater quality showcase event geared for industry professionals.

In a continual effort to expand, PULSCO is exhibiting this year at the WEFTEC 2017 show in Chicago, October 2nd through the 4th, booth 5157, at the McCormick Place.

Our double display features a Hydropneumatic Surge Control System design process displaying engineering analysis and design, tank delivery, controls and instrumentation plus commissioning. The event showcases several of PULSCO's new innovations including several new 700 series Skypark Controller models, Remote System Monitoring, and Professional Services including Transient Analysis modeling, On-site Consulting, and Field upgrades. PULSCO's unique position of offering both traditional Hydropneumatic 'Air-over-Water' or Bladder based systems for either SURGE or PRESSURE applications provide a true 'value engineered' proposal within the ISO 9001:2008 based Quality Management System.

Engineering will be in attendance to demonstrate the next generation of Hydropneumatic System Controllers; a configurable off-the-shelf solution featuring low power consumption, scalability, and a small footprint. Design objectives include 'price value' solutions, reduction of Specifications and Submittal cycles, plus ease of job site installations for both new and existing controls/instrumentation 'upgrade' projects. PULSCO will also be introducing the PULSCO ShockTracker™ Mobile, a portable device for field use in the logging of 'events' during operations including pump cycling, valve closures, and peak demand timing. Additionally, Engineering and Sales will be available to discuss new alliance partnerships for Bladder materials, ASME tank fabrication, enhanced transient 'modeling' capabilities targeting both public and private water entities, and new industrial systems applications.

PULSCO invites clients, consulting engineers, contractors, plant operators and suppliers to visit, meet on site and learn about the new products and services now available.

ABOUT PULSCO, INC

Since 1922, PULSCO has been the pioneer in designing and supplying solutions for Hydropneumatic Surge and Pressure Control Systems, Severe Service Silencers and Liquid and Gas Pulsation Dampeners. PULSCO's Hydropneumatic Systems are widely recognized by engineers, contractors and system users as the most dependable, predictable, safest, and cost efficient form of surge protection available. PULSCO is ISO 9001:2008 and AS9100C certified and is a Tier 1 supplier to the aerospace, defense industries, and process management sectors as well as municipal water entities worldwide.
